(a) Grounding taken as an answer

returned box (blue) vs expert box (green)

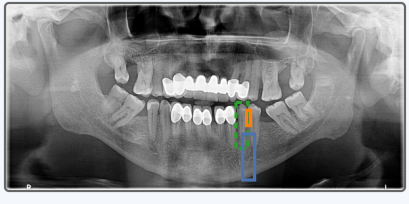

crop of the returned box

The crop looks authoritative.

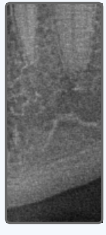

Every later observation is built on
a box that is wrong - here it sits
0.69 box-heights below the expert box.

Nothing in the loop questions the box.

(b) Grounding as a hypothesis (ours)

same image; the box is corrected (orange)

inspect: “... too low”

nudge_crop × 3

dy -0.3 · -0.5 · -0.6

re-inspect: crown confirmed

final answer

Q3T4 · Caries
confidence 0.82

matches expert label

box returned by the grounding tool

expert box
