input · native-resolution OPG

shared dispatcher - every image-consuming tool
runs on base_image; the crop chain never compounds

input geometry: TPU = canonical views + static
slots (no recompile); GPU = native so far -
decision pending; tools always run native

base_image · full resolution

final answer - findings JSON

```
[{"quadrant":1,"tooth_position":6,"diagnosis":"Periapical Lesion","confidence":0.82}, ...]
```

5 per-image findings

Evaluation

set-matched precision / recall / F1
over multi-finding predictions

95% bootstrap confidence intervals

heavy runs on GPU or TPU
(target decision pending - see input geometry)

probes (mechanism evidence):

- tool removal: with vs without
- perturbation: shown-box vs true-box
- nudge budget K sweep

(results pending)
